Press Release

Szrek2Solutions' Trusted Draw™ System Launch for Oregon Lottery

Apr 2013, RI, USA - [Szrek2Solutions](http://www.szrek.com) announced that it has recently launched its Trusted Draw™ System, in cooperation with GTECH Corporation, IMARCSGroup and Oregon Lottery. Szrek2Solutions signed a five year license and service agreement with GTECH, to deliver Trusted Draw™ Systems and technical support services to perform draws for Second Chance Games for the Oregon Lottery.

The Trusted Draw System generates winners for second chance draws for Oregon Lottery's instant games. Lottery players register their tickets on the Lottery website. Before the draw all ticket and player information is provided to Trusted Draw System, where it is used to generate draw outcomes. To ensure draw security, Trusted Draw digitally signs ticket and player data creating a draw "seal" and generates unpredictable, statistically independent non-repudiable winning results.

Szrek2Solutions provides a secure and reliable method and an independent platform for random numbers generation (RNG) for traditional on-line, internet, mobile and other gaming channels. Szrek2Solutions utilizes its patented RNG method, RUN+A (Random Unpredictable Numbers with Audit), based on asymmetric properties of digital signatures. A digital signature generated with a private key is used as a random number seed. The signature and any derived from it random numbers can be verified using the public key. For digital signing Trusted Draw uses secure, tamper evident NIST certified HSM (Hardware Security Module).

The unique benefit of Szrek2Solutions' RNG technology is that produced unpredictable and unbiased random numbers can be mathematically verified to detect any potential fraud. The RNG has been certified by several US and international independent labs and has been used successfully since 2005 by numerous lottery operators and state licensed lotteries in the world, including Danske Spil in Denmark, Lottomatica in Italy, and Texas Lottery in the US. Other US lotteries that used Trusted Draw include Florida Lottery, Kansas Lottery and South Carolina Lottery.

Along with the Trusted Draw, Szrek2Solutions offers companion products: Trusted Audit™ for integrity verification and audit, Trusted Monitor™, for remote monitoring of RNG and audit processes and reporting; a Szrek2Solutions product suite includes also Trusted Play™, a high performance RNG server generating outcomes for e-instant games and multiplayer games, Trusted Transactions™, securing lottery transactions, Trusted Ticket™, authenticating lottery tickets.

Szrek2Solutions LLC is a private, international product and service supplier based in RI, USA, dedicated to secure solutions for the gaming industry. Szrek2Solutions customers include GTECH, Lottomatica, Sisal and Danske Spil. For more information, please visit www.szrek.com.
