Szrek2Solutions

Press Release

Szrek2Solutions Obtained US Patent for “Management of Outcomes of Games of Chance “

May 22, 2012, RI, USA - [Szrek2Solutions](http://www.szrek.com) announced that it was awarded a US patent for “MANAGEMENT OF OUTCOMES OF GAMES OF CHANCE” (US patent no 8,182,327). The subject of this invention is a novel and unique way of performing drawing for games of chance. The drawing method allows for controlling probability that at least one wager wins the main prize.

For traditional game types, such as Lotto or Joker, a game provider cannot control the frequency of the jackpot winnings, whether they are too often or too seldom, without changing the game matrix. However changing the matrix of the game is not always desirable. This innovative method from S2S offers gaming organizations control over winning jackpot games, while preserving the games and their integrity. For some games, it is desirable to reduce the odds or to ensure a jackpot winner from time to time. For other games, it may be desirable to reduce frequency of jackpot winning to produce higher prizes. This patented method allows guaranteeing jackpot winners with desired probability. For example, for a lotto game a lottery organization may guarantee a jackpot winner for all draws or a specific desirable percentage of draws.

Szrek2Solutions incorporated this new method in its Trusted Draw™ electronic drawing system and it is now available to current and new clients. Trusted Draw RNG has been certified by several US and international independent labs and is currently utilized by numerous lottery operators and state licensed lotteries in the world, including Danske Spil in Denmark, Lottomatica in Italy, BigaBoom in Russia, and Texas Lottery in the US.

S2S's RNG platform includes also a Trusted Play™ product, a high performance RNG server generating outcomes for e-instant games and multiplayer games, for wide range of gaming products and environments. Other S2S's products include Trusted Transactions™, securing lottery transactions, Trusted Ticket™, authenticating lottery tickets, and companion products: Trusted Audit™ providing integrity verification and audit, Trusted Monitor™, allowing remote monitoring of RNG and audit processes and reporting.

Szrek2Solutions LLC is a private, international consultancy and product supplier dedicated to secure solutions for the gaming industry. Headquartered in Rhode Island, S2S offers product implementation, delivery, support, and consulting services in the area of gaming systems, data security, system architecture, and game design. Szrek2Solutions customers include GTECH, Lottomatica, Sisal, BigaBoom and Danske Spil. For more information, please visit www.szrek.com.
