## Szrek2Solutions To Provide Trusted Play™ Secure Instant Bet Generation System To the Danish Lottery

Szrek2Solutions (USA) to collaborate with Dansk Tipstjeneste (Denmark) and Betware (Iceland) in providing secure instant games over the internet

**East Greenwich, RI, July 6, 2005:** Szrek2Solutions LLC today announced the signing of a license and services agreement with the Danish Lottery, Dansk Tipstjeneste, calling for the implementation of Trusted Play™, an instant bet generation and audit system offering the most advanced random number security available to the gaming industry. Trusted Play™ will be used to generate the bet outcomes for instant lottery games offered by Dansk Tipstjeneste to lottery players in Denmark over its existing internet platform supplied by Betware of Iceland. Dansk Tipstjeneste will use audit functionality in Trusted Play to verify the integrity of the instant game outcomes produced by the Trusted Play system and satisfy remote audit requirements of Danish Gaming Board.

Dansk Tipstjeneste, a recognized innovator in the lottery industry, indicated that it had selected Szrek2Solutions and Trusted Play primarily for reasons of reliability and system integrity. Jørgen Falsvig, IT Director/CIO of Dansk Tipstjeneste commented, "I have complete confidence in Trusted Play™ and in Szrek2Solutions, having previously worked with the founders and principals of Szrek2Solutions, Irena and Walter Szrek."

After Betware integrated Trusted Play into their platform, Stefan Hrafnelsson, CEO of Betware stated "Trusted Play was easy and quick to integrate with and it supports better auditability than I have ever seen before".

Szrek2Solutions believes the implementation of Trusted Play by Dansk Tipstjeneste will set a new lottery industry standard for RNG (random number generation) – **to detect and prove fraud**. Trusted Play™ offers a unique feature of audit of random numbers based on RUN+A (Random Unpredictable Numbers with Audit) methodology, patented by Szrek2Solutions, utilizing asymmetric encryption technology (public/private key) to digitally sign game data and produce a unique random number set. The digital signature used in the process can be "decoded" at any subsequent point in time to recreate and verify both the number set and the associated game data. Trusted Play™ has potential application in a wide range of instant win games, including class II, class III, bingo, keno, lotto, numbers and card games, on a wide range of betting platforms, including traditional lottery terminals, video lottery terminals, and internet and mobile phone wagering.

Szrek2Solutions ([www.szrek.com](http://www.szrek.com)) is a private, international consultancy and product design firm specializing in secure software systems solutions for the gaming industry. Headquartered in East Greenwich, RI, USA, Szrek2Solutions offers products including Trusted Play™, a secure instant bet generation and audit system, and Trusted Draw™, a secure electronic draw system with audit, and TV and Web graphics animation.
