Szrek2Solutions' Trusted Draw Platform Goes Live for Sizekhaya in South Africa

East Greenwich, RI, June 1, 2026: Szrek2Solutions LLC announced that its Trusted Draw Platform has gone live for Sizekhaya in South Africa, as the primary draw solution for the Daily Lotto game and as the backup electronic draw solution for Lotto and PowerBall. The go-live marks the start of an eight-year contract term running from June 1, 2026 through May 31, 2034, with possible extensions. Szrek2Solutions' RNG technology has supported South African National Lottery operations since 2015 for ITHUBA, South Africa's Third National Lottery and Sports Pools operator.

Szrek2Solutions' Trusted Draw Platform is an electronic draw solution that combines Trusted Draw™ random number generation, Trusted Audit™ independent verification, and Trusted Monitor™ operational visibility. The primary and backup environments are deployed on premises in South African data centers, supporting local control, redundancy, and business continuity. The platform supports scheduled draws, manual operations, and the flexibility to add future games and central gaming system integrations.

Trusted Audit independently verifies each result by reconstructing the draw and detecting any RNG fault or fraud-related issue. Draws can be verified immediately after generation or later whenever needed.

Trusted Monitor provides a web-based dashboard for operators, auditors, and observers to monitor draw activity, verification status, reports, logs, system health, and warnings. Authorized users can review results, inspect system health and authenticity, and export or print draw and audit reports with minimal operator input.

Sizekhaya Holdings (RF) (Pty) Ltd is South Africa's Fourth National Lottery and Sports Pools operator.

For over 20 years, Szrek2Solutions has delivered secure RNG systems for lottery games worldwide, supporting daily and weekly draws, instant-win and other iLottery games, raffles, frequent-draw games, and second-chance draws. As a leading provider of secure RNG technology, the company helps lotteries modernize draw operations while maintaining security, transparency, and regulatory compliance. Its Trusted Draw Platform combines certified random number generation with patented proof-of-integrity technology, enabling every draw result to be independently verified. Certified by multiple laboratories across five continents and independently attested to by Bulletproof, a GLI company, for providing conclusive verification of draw integrity, the platform delivers transparent, auditable results for lotteries and regulators. Trusted Draw supports flexible deployment models, including automated, manual, remote, on-premises, and secure cloud-based configurations, to meet diverse operational and regulatory requirements. Szrek2Solutions works with lottery Central Gaming System vendors including Brightstar Lottery, Bally's Intralot, Scientific Games International, WinSystems, Paytronix Systems, Genlot, as well as operators and lotteries across the U.S., Europe, and Africa, including in South Africa, Tanzania, and Uganda.
